SERVICENOW SYSTEM ADMINISTRATOR · NAAN MUDHALVAN (SMARTBRIDGE)

Project Demo Planning

Phase 8 · Project Demonstration

Deepak P (Team Lead) · Hemanthan B N · Ganesh A K · Irfan Rifayil Z

This document is the plan for the recorded demonstration video of the Script-Controlled ACL project. It fixes the objective, the audience, the environment, the running order of the roughly two-minute narrated recording, and the on-screen evidence captured at each step so the recording is repeatable and gradeable.

Objective

Show, on a live ServiceNow Personal Developer Instance, that record access to the u_institution_details table is controlled by both the user's role and the Branch field value, using impersonation to prove three distinct outcomes for three personas.

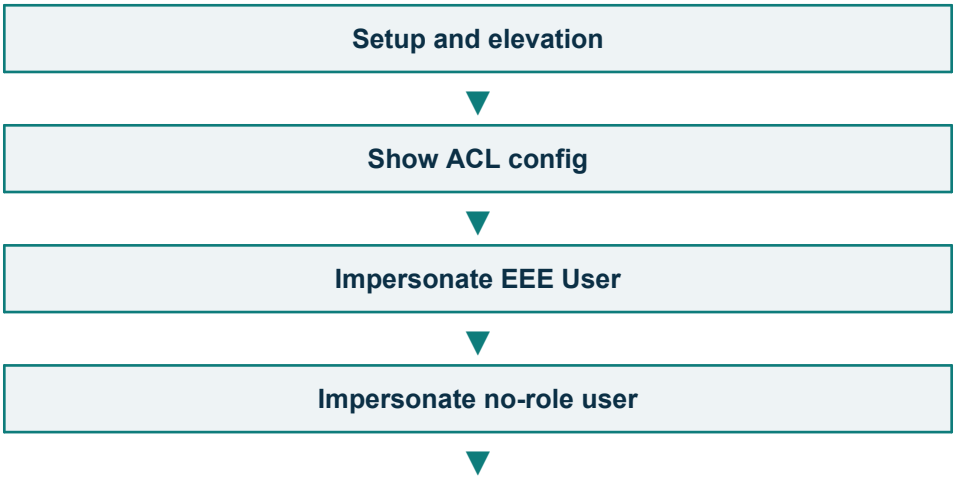

Audience

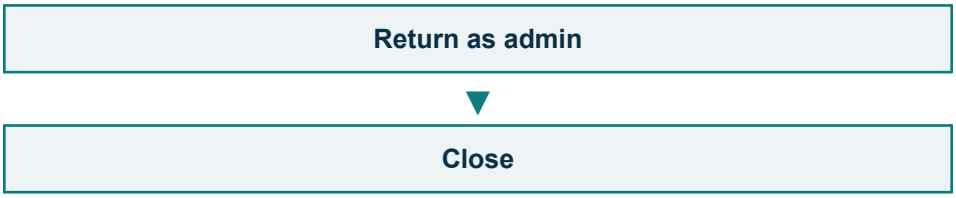

- SmartInternz / Naan Mudhalvan evaluator grading the capstone.
- The institution's data-security stakeholders who need branch-level record privacy.
- Future ServiceNow administrators who will reuse the pattern on other tables.

Environment

Instance	dev443713.service-now.com (Personal Developer Instance)
Release family	Australia / Zurich family
Built on	2026-09-28
Table under test	u_institution_details
Personas	EEE User (bb1-bb4), Abel Tuter (no roles), System Administrator (admin)
Capture	Screen recording of the browser with voice narration, ~2 minutes

Recording Flow

Running Order and Timeline (~120 seconds)

Time	Segment	Narration focus	Evidence on screen
0:00-0:15	Intro	State the problem: any user can read every record	Table list showing all 4 records as admin
0:15-0:35	ACL config	Explain the four ACLs and the READ script	Read ACL open: bb1, Advanced, Branch is EEE, script
0:35-0:45	Roles	Show EEE User carries bb1-bb4	EEE User record with the four roles
0:45-1:15	EEE User proof	Impersonate and read the filtered list, then manage a record	List shows only EEE001, EEE002; EEE001 editable with Update/Delete; New visible
1:15-1:35	No-role proof	Impersonate a user with no bb roles	Security constraints prevent access to requested page
1:35-1:55	Admin proof	Return as System Administrator	All 4 records visible again
1:55-2:00	Close	Restate: access = role plus Branch value	Summary slide or final list view

Pre-Recording Checklist

- security_admin already elevated so no pause during recording.
- All four sample records present (ECE001, EEE001, EEE002, CSE001).
- EEE User confirmed to hold bb1-bb4; a no-role user (Abel Tuter) identified for the block test.
- Impersonation exit path rehearsed so returning to admin is smooth on camera.
